

Guidance, Navigation, Control.

Complete Guided Weapon Solutions

Honeywell's family of guided weapon solutions includes both ring laser gyro (RLG) and micro electro-mechanical sensor (MEMS) based Inertial Measurement Solutions (IMU) for missile, munition, projectile and UAV applications. Our HG1700 IMU is ideally suited for low cost missile and air delivered weapon applications requiring reliable, high accuracy guidance and control. Our newest generation of MEMS based IMUs, the HG1900 and HG1930, offer significantly smaller volume, lower power and the ability to operate after gun shock and extended storage. From low-cost, light weight units to gun hard inertial solutions, accuracy is Honeywell.

Visit the Honeywell booth #F075b at the Eurosatory Show, 16-20 June.
