

CILAS : developer and integrator of laser and optronic technologies

Detect See Locate Designate Guide Transmit
Interfere Deceive Immobilise Destroy.

Cilas is an expert in laser and optronic technologies that **creates applied innovation for operational systems.** It's this functional innovation that makes the difference on the battlefield.

Cilas is specialised in the miniaturisation and militarization of laser sources and is constantly innovating to offer systems that can tolerate use in extreme environments (temperatures from -40°C to $+50^{\circ}\text{C}$; altitudes from -500 to $+10,000$ metres). Whether embarked or portable, CILAS equipment provides in the field precision, reliability and robustness.

Cilas is expert in all the required technologies : sources, equipment, systems.

As the holder of many patents, the developer of the Eye Safe (ocular safety) system and inventor of high performance optical detection systems, it is recognised for its multiple competences. The convergence of its

knowledge in lasers, electronics, information technologies, optronics, optics, mechanics... make Cilas the integrator for laser and optronic technologies.

Cilas deploys its technology for defence and security missions.

Surveillance, control, protection, dissuasion – missions for which Cilas products have been designed to operate 24/7. The limitless properties of lasers provide real potential that is subject to continuous development.
